

SYMBOL	DESCRIPTION	DISPLAY
	<b>Door Open</b> The door opens and remains in its maximum open position.	OPEN
	<b>Door Closed</b> The door closes and remains closed in this position until the mode is changed. If the electrolock is installed, the door closes and is blocked so that no-one can enter.	CLSE
	<b>Two-way Automatic</b> This is the most common working mode. It allows the door to travel in both directions and all detection devices are enabled.	AU-b
	<b>Partial Automatic</b> The functioning here is the same as for "two-way Automatic" mode, with the difference that the leaves do not go to maximum open position but instead open partially. This opening is user adjustable.	AU-P
	<b>Exit Only</b> The door only functions in exit direction. In exit direction it works in "two-way Automatic" mode, and in entry direction its mode is "Door Closed".	EXIT
	<b>Pharmacy Opening</b> The electro-lock must be installed for this to function. The door stops in half-open position, with a minimum opening (adjustable), and remains blocked.	A-FR
	<b>Reset</b> It is the general reset function, and it is use when in cases of alarm or door is not working properly.	----

In case of not achieving a correct performance after resetting
